

TD V123-012-CA (en)

Part No.: V123-012

Name: VC Aluminium Beam Clamp

Weight: 9.92 lbs

Standard: EN 13374-A; COHS; ANSI/ASSE

Regulation: OSHA (CAN); OSHA (USA)

Material: Galvanised Steel

Dimensions: imperial [metric]

This Technical Document must always be used in conjunction with **HAKI's General Qualifications** -See below

1. Always plan your work and installation
2. Always select the right equipment
3. Always regularly inspect your system

www.HAKI.com

TD V123-012-CA (en)

1. Place Aluminum Beam Clamp on the aluminum beam and secure by tightening the hex head bolt. Torque the bolt to 40 Nm.

- 2.

Slide V-Post into the post socket in the V-Cast. You will hear a click when the post is secured.

- 3.

- 1 Based on 2.7m C/C (675N + 12.5% = 759.4N)
- 2 Factored Load (1.5) Based on 2.7m C/C

TD V123-012-CA (en)

4.

Correct orientation of Barrier

Incorrect orientation of Barrier

5.

* 8'-10⁵/₁₆" [2.7m] C/C - safety factor at max. raised height = 1.67

General Qualifications

These General Qualifications are applicable to HAKI products and must always be read in conjunction with each products Technical Documentation (TD).

General
<ul style="list-style-type: none">• Always check general product condition before use• If in doubt always ask by contacting a representative of <u>HAKI</u>• Reject any damaged or rusty components• <u>HAKI</u> products and systems provide temporary protection during construction activity.• <u>HAKI</u> products are NOT tested or intended:<ul style="list-style-type: none">- to withstand impact by any vehicle,- to support or provide control of the public,- for the containment of bulk materials.
Always plan your works
<ul style="list-style-type: none">• Take note of location, proximity to permanent and temporary hazard structures.• Take note of dimensions, layout and access areas.• Always identify both the fall hazard for the installer and the falling materials hazard for persons and property below.• These identified hazards should also be considered on dismantling.• <u>HAKI</u> strongly recommends seeking competent Work at Height advice if in any doubt about the installer's or other's safety.• Note the component weight as given on the TD sheets and ensure suitable handling equipment is available.• Ensure local site Risk Assessment / Method Statement detail is observed and followed.

Fixing selection
<ul style="list-style-type: none"> • All fixings should be confirmed as suitable for the chosen application site. • Material type and thickness, edge proximity, depth of embedment, and proximity to other fixings, all impact the strength of a fixing. Please refer to manufacturer's instructions for fixing guidance and limitation. • The dimensions for installation and the load capacity should be confirmed by the fixing manufacturer for each application. • Competent fixings advice should be sought if in any doubt.
Fine mesh containment
<ul style="list-style-type: none"> • Note that the addition of any fine containment mesh (such as on barriers or safety nets) increases the wind load attracted to the supports. • Technical advice must be sought before any such addition.
Weather
<ul style="list-style-type: none"> • HAKI products and systems can be adversely impacted by significant wind speeds. Please note limitations on product TD and take any recommended remedial action. If in doubt, contact a HAKI representative. • If in doubt, cease work, and use additional protection measures as required. • All safety systems should be kept clear of ice and snow.
Inspection
<ul style="list-style-type: none"> • All installed systems should be checked at least once every 7 days by a competent person, to ensure its continued integrity and that there are no signs of any potential failing. • We recommend that these checks are recorded in a site log. • Please ensure any defective product identified during inspection is replaced immediately.
Loading
<ul style="list-style-type: none"> • Any HAKI products subjected to loading, or used in anger, should be assessed to ensure it continues to provide the necessary protection. If this involves removing from service you must ensure the area is otherwise protected. • The system should then be fully inspected, any components replaced as necessary, and the installation confirmed as fit for continued use by a competent person.
Storage
<ul style="list-style-type: none"> • HAKI recommends the use of its own storage and transit solutions. • Take careful note of lifting and loading limits. • All components should be stored in a manner that limits any detrimental environmental effect due to weather or corrosive substances.
Traceability
<ul style="list-style-type: none"> • All HAKI products are traceable.

Key		
	Symbol	Meaning
1.		Always check / Always confirm
2.		Fall Hazard
3.		Do this
4		Don't do this
5		Be Aware
6		Moment Load
7		Max Wind Load
8		Insert
9		Movement / Rotation
10		Movement
11		Torque Spanner and settings
12		Tighten
13		Untighten
14		Tighten by hand
15		Concrete slab/floor/wall
16.		Shear Load
17.		Tensile Load
